

VACCINATE TO ELIMINATE RABIES

WHAT IS RABIES?

Rabies is a viral infection passed from animals to other animals or humans, usually through a bite. The virus affects the brain, and is nearly always fatal (causes death). Here's how we control rabies in animals and reduce transmission to people.

1. VACCINATE DOGS

Rabies shots protect dogs and people. Because dog vaccination is common in the United States, people don't get rabies from dogs like they do in countries where dogs are not vaccinated.

2. VACCINATE CATS

In the last 25 years, most of the rabid domestic animals in the US have been cats. Cats are almost 5 times as likely as dogs to get rabies - but you can prevent this by vaccinating them.

3. VACCINATE WILDLIFE

Many Vermont wildlife are vaccinated with an edible vaccine through a bait drop. Do not touch or feed wildlife.

4. PREVENTION IN PEOPLE

If you are bitten or scratched by an animal or find a bat in a room where you were sleeping, wash any wound thoroughly. Call your doctor and the health department. 1-800-4-RABIES. You may need to get post-exposure prophylaxis (PEP), a series of shots that keep the virus from making people sick.
